STUDY COMPANION · FALL 2026

English for Engineering I

Weeks 1–4

All rules, questions and tasks from every course file and the assigned book pages — each exercise transcribed by hand and followed by a complete answer key. Covers introductions and the present simple, articles and the tense review, quantifiers and the language of numbers, and reading and writing about movement and change. Compiled for independent study and Test 1 preparation

Tashkent University of Technology · Faculty of Energy Engineering

2.6.1 Video comprehension questions . . . 12
2.6.2 Pair and group discussion questions . . . 12

3 Week 2 — Semester Planning; Present Simple vs Continuous; Articles 13
3.1 Grammar catalogue for Week 2 . . . 13
3.1.1 Present simple (general time) . . . 13
3.1.2 Present continuous (now) . . . 13
3.2 Week 2 Lecture, Part 1: speaking — giving your opinion . . . 15
3.3 Week 2 Lecture, Part 2: reading — “Generalize, but don’t stereotype!” . . . 16
3.4 Week 2 Lecture, Part 3: articles quotes — solutions . . . 17
3.5 Week 2 Lecture, Activity 1: circle the correct form — solutions . . . 17
3.6 Week 2 Lecture, Activity 2: complete with a/an, the, or — (no article) — solutions . . . 18
3.7 Week 2 Lecture, Part 4: generalizing — listening and discussion . . . 19
3.8 Grammar Worksheet: Present Simple and adverbs of frequency — exercises and solutions . . . 19
3.8.1 Exercise 1: complete with the present simple form of the verbs . . . 19
3.8.2 Exercise 2: find and correct five mistakes with the position of frequency adverbs and time expressions . . . 20
3.8.3 Exercise 3: complete the text with words from the boxes . . . 20

3.9 Business Grammar & Practice: present simple vs present continuous — all five exercises and solutions 20
3.9.1 Exercise 1 — Routine vs moment of speaking 21
3.9.2 Exercise 2 — General activities vs current projects 21
3.9.3 Exercise 3 — Permanent vs temporary situations 21
3.9.4 Exercise 4 — Facts vs slow changes 22
3.9.5 Exercise 5 — Stative verbs 22

4 Week 3 — Numbers and Everyday Quantification; Quantifiers 23
4.1 Grammar catalogue for Week 3 23
4.1.1 Quantifiers with countable and uncountable nouns 23
4.1.2 Quantity: none, all, each, every 23
4.1.3 Quantifiers: the lecture panel (large / small / zero quantities) . . . 25
4.1.4 Talking about numbers (Week 3 lecture, Part 4) 26
4.2 Week 3 Lecture, Part 1: listening — a day without power 27
4.3 Week 3 Lecture, Part 2: quantifiers — lead-in, Activity 1 and Activity 2 with solutions 28
4.3.1 Lead-in (audio 9.10) 28
4.3.2 Activity 1: circle the correct word or phrase — tick if both are possible 28
4.3.3 Activity 2: are the highlighted phrases right (✓) or wrong (X)? Correct the wrong ones 29
4.4 Week 3 Lecture, Part 3: reading — “8 ways to tidy up your digital life” . 29
4.5 Numbers practice, Section B: activities 1–4 with solutions 31
4.5.1 Activity 1: answer the questions 31
4.5.2 Activity 2: complete the conversation with the correct words 31
4.5.3 Activity 3: rewrite the sentences using the correct form of the word in brackets 32
4.5.4 Activity 4: complete the email from a maths tutor 32
4.6 Numbers practice, Section C: talking about numbers — exercises 1–6 with solutions 33
4.6.1 Exercises 1–2: proportions 33
4.6.2 Exercises 4–5: averages 34
4.6.3 Exercise 6: complete the text describing the table 34
4.7 Week 3 Grammar Worksheet — Quantifiers: exercises 1–7 with solutions 35
4.7.1 Exercise 1: complete the question with how many or how much . . 35
4.7.2 Exercise 2: complete with aren’t many or isn’t much 35
4.7.3 Exercise 3: complete each sentence so that it contains the word in capitals 35
4.7.4 Exercise 4: complete the sentence with few or little 36
4.7.5 Exercise 5: complete the text with many, much, few, lots, none and little 36

4.7.6 Exercise 6: complete the sentence with one word so that it means the same as the first sentence . . . 37
4.7.7 Exercise 7: underline the correct option (deserts) . . . 37
4.8 Professional English in Use: Numbers and trends — exercises and suggested answers . . . 38
4.8.1 Exercise A: brainstorm graph words . . . 38
4.8.2 Exercise C: complete the gaps in these presentation extracts . . . 38

5 Week 4 — Reading and Writing about Movement; Preposi- tions; Test 1 39
5.1 Grammar catalogue for Week 4: prepositions . . . 39
5.1.1 Prepositions of movement . . . 39
5.1.2 Prepositions of place and time (review cluster) . . . 40
5.1.3 Dependent prepositions (verb/noun + preposition) . . . 40

1 Course Map and How to Use This Document

This document is a complete, self-contained companion for the first four weeks of the Foundation course English for Engineering – I at Tashkent University of Technology (Fall 2026, 4 ECTS). It was compiled by hand from every relevant source in the repository folder course-files/ english-for-engineering/: the official Syllabus, the Week 1, Week 2 and Week 3 lecture decks, all five grammar worksheets (Present Simple and Adverbs of Frequency, Tense Review 3A, Articles, Quantifiers and the Business Grammar & Practice pages), the two reading files (The power of numbers and Numbers and trends), the TED Talk question sheet, the Irregular Verbs appendix, and the three syllabus images (assessment methods, indicative literature, book pages). Every question, gap-fill, matching task and discussion prompt that appears in those sources is reproduced here word-for-word, and every exercise is followed by a full answer key with a short explanation of why each answer is correct. Every grammar rule that the sources teach is collected into per-week "rules catalogues" at the start of each weekly part, so the document can be used both as a workbook and as a reference grammar. The scope follows the official course structure. Week 1 opens the course: students introduce themselves, their studies and their interests; the diagnostic test is taken; and the first grammar block is the present simple with adverbs and expressions of frequency, practised through a video, pair work and a lifestyle questionnaire. Week 2 continues semester planning: the listening and speaking strand works with statements and the language of opinion and generalization, the reading strand contrasts generalizations with harmful stereotypes, and the grammar blocks review the present simple against the present continuous and introduce the article system (a/an, the and zero article). Week 3 is devoted to numbers and everyday quantification: quantifiers (much, many, few, little, enough, all, each, every, both, neither), the language of proportions and averages, and the numeracy vocabulary needed to work with numbers. Week 4 turns to reading and writing about movement and change: the grammar focus defined in the syllabus is prepositions, the readings describe the speed of change and trends, and the week closes with Test 1 on the Week 1–3 material. The GUIDANCE implied by the syllabus assessment table states that Test 1 is a paper-based writing task (1 hour, 10 %), so the Week 1–3 grammar catalogues below receive the most detailed treatment. Each weekly part of this document has the same internal structure. First comes the rules catalogue: every rule, form table and language box that the week's sources teach, written out formally and numbered continuously so that any rule can be cited from the answer keys. Then come the questions and tasks, grouped exactly as they appear in the source files, each tagged with its source and followed immediately by a complete answer key. Listening and video activities are reproduced with their tasks; where an answer depends on a recording that only students can hear, the key marks the expected answer type and the most probable completion, so the exercise can still be checked in class. The final part collects supplementary material — the full irregular verb table, the indicative literature and the media library — so that the question bank here is complete "to the end", as requested.

1.1 The course at a glance

The module description states that the course prepares Foundation students to move from general school English to confident, accurate and organized everyday and academic communication. It reviews and consolidates core grammatical structures — the present simple, past simple, present perfect, quantifiers and relative clauses — and applies them to real communicative tasks such as introducing oneself, describ-

ing routines and past events, and writing simple definitions. By the end of the course students should have the general English proficiency and academic communication skills needed to follow their engineering coursework in English.

Field Content

Subject / module name	English for Engineering – I
Academic year / semester2026–2027, Fall (semester 1)	
Module type	Mandatory, Bachelor of Science, all tracks
ECTS / total workload	4 ECTS; 120 hours total
Classroom hours	60 (30 lecture +30 practical); independent study 60
Module coordinators	Ella Tsoy, Florence Dujarric
Faculty	Faculty of Energy Engineering
Entry requirements	No prerequisites, no co-requisites

Table 1: Module information (Syllabus, Section 1–4).

1.2 Weekly plan and sources

Week Syllabus topic Source files used in this companion

1	Introductions, listening, oral expression: introducing yourself, your studies and your interests; diagnostic test; grammar – tenses; listening to a TED Talk; interactive oral expression Week_1_Lecture.pdf; TED_Talk_ Questions_-_Stereotypes.pdf; Grammar_ Worksheet_-_Present_Simple_and_ Adverbs_of_Frequency.pdf
2	Semester planning, grammar and oral expression: feedback on the diagnostic test; grammar – tenses; listening; interactive oral expression Week_2_Lecture.pdf; Grammar_Worksheet_ -_Articles.pdf; TENSE_REVIEW_3A.pdf; BusinessGramPractice_-_Present_simple_ vs_Continuous.pdf

Table 2: Weeks 1–4 of the syllabus and the files this companion transcribes.

1.3 Assessment, grading and attendance

The assessment image and Syllabus Section 9 define five graded components. Note that Tests 1 and 2 and the quizzes are paper-based writing tasks, which is why the answer keys in this companion always model full written sentences.

Component Examination type Duration Weight ILOs

Midterm examPaper-based reading and writing tasks	1–2 hours	30 %	1–4	
Test 1	Paper-based writing task	1 hour	10 %	1, 2, 3
Test 2	Paper-based writing task	1 hour	10 %	1, 2, 3
Quizzes	Paper-based writing task, 20 minutes each	20 min	20 %	1, 2, 3
Final exam	Paper-based reading, writing and listening test	1–2 hours	30 %	1–4

Table 3: Assessment methods and completion (Syllabus, Section 9).

Grading scale: 90–100 points $= A$ (Excellent); $75 - 89 = B$ (Good); $60 - 74 = C$ (Satisfactory); $0 - 59 = D$ (Poor). Attendance requirement: students must attend at least 75 % of class meetings to be allowed to take the final exam; missing 25 % or more excludes a student from the final.

The syllabus also carries a zero-tolerance policy on plagiarism (first case $= 0$ on the assignment; second case $= 0$ with no reattempt; third case = automatic failure) and requires AI-assisted work to be cited as a source.

1.4 Course media library

Several listening and video files are stored next to the documents. They belong to the week plan as follows.

File Type Where it is used

TED_Talk_Questions_-_	
Stereotypes.pdf video sheetWeek 1: TED Talk listening (Olivia, “Stereotypes”); comprehension questions reproduced in §2.6	
ef5e_preint_1a_1_ vocabulary.mp4 video	Week 1: five people answer “Getting to know you” questions (lecture Activity 2)
Stephen_Fry_-_What_ Makes_Us_Human.mp4 video	Week 2 / listening strand: BBC Radio 2 discussion used for oral expression practice
Forum60sec__Exchange_ leaders_of_deve.mp3 audio	Week 3 / listening strand: 60-second forum extract on exchange and development

Table 4: Media files in the course folder.

Audio & video access — scan the QR code

Point a phone camera at a code and the recording opens in the browser; no login is needed. The three

course files are served from the course repository, where they sit next to the documents (§1.4). The

fourth code links to 6 Minute English from BBC Learning English—short downloadable episodes

that match the listening strand of Weeks 1–4 and make good daily practice. Coursebook audio

tracks quoted in the lectures (3.12–3.13, 3.18–3.19, 9.9–9.10) are not stored in the folder; they are

available from the coursebook platform provided by the instructor.

Week 1: English File video

1a_1_vocabulary.mp4 BBC Radio 2: Stephen Fry What Makes Us Human Week 3: 60-second forum exchange & development TED Talk (Week 1): Olivia Markaryan Extra practice: 6 Minute English

2 Week 1 — Introductions; the Present Simple and Frequency Adverbs

2.1 Grammar catalogue for Week 1

Week 1 reviews the present simple for routines and habits and the position of frequency adverbs. The rules below collect the grammar panels of Week_1_Lecture.pdf (reference numbers 1.11– 1.12 of the coursebook it reproduces) and the complete rules page of Grammar_Worksheet_-_Present_Simple_and_Adverbs_of_Frequency.pdf.

1. Use of the present simple. We use the present simple to talk about habits and routines (I play tennis every week.) and about things that are always true (Sleep is really important for health.). The lecture deck adds the parallel formulation: we use the present simple for things we do every day / week / year, or which are generally true or always happen.

2. Form. We form the present simple with the infinitive form of the verb. To make negative sentences we add don’t before the verb; to make questions we add do before the subject. After he, she, it we add -s to the verb; we use doesn’t in negative sentences and does in questions.

+ – ? I/you/we/they I eat. You don’t eat. Do you eat? he/she/it She eats. He doesn’t eat. Does he/she/it eat?

Table 5: Present simple: affirmative, negative and question forms.

The verb be is different from all other verbs.

+ – ? I I’m fit. I’m not fit. Am I fit?

you/we/they	We’re fit.	They aren’t fit.	Are you fit?
he/she/it	She’s fit.	She isn’t fit.	Is he fit?

Table 6: The verb be in the present simple.

3. Spelling of the third person -s (lecture panel 1.11): work → works (add -s); study → studies (consonant $+y \rightarrow -$ies); finish → finishes (add -es after sh, ch, ss, x); go → goes, do → does (add -es); have → has (change to -s).

4. Adverbs and expressions of frequency. We use adverbs and other expressions in present simple sentences to talk about how often we do things: Mike usually goes for a run in the evening.; I'm often late for work.; I have a hot drink five or six times a day.; We go on holiday two or three times a year. The frequency scale runs from 100 % to 0 %: always → usually → often → sometimes → not often → rarely → (never). The lecture deck adds hardly ever between rarely and sometimes.

5. Position of frequency adverbs. Adverbs of frequency go before the main verb, but after the verb to be: They never eat out.; She's always out at the weekend.; I don't often do sport. The lecture panel warns: She's never ill. but not She's ill never; with $a(+)$ verb use never, not doesn't…never (It never rains., not It doesn't never rain.).

6. Position of frequency expressions. Expressions of frequency (every day, once a week, twice a month…) normally go at the beginning or end of a sentence: I go out with friends three or four times a week.; Once a week, I go for a run.

7. 'Returning' a question (conversation strategy box). When you are having a conversation, you often 'return' questions, for example ask somebody the same question that they asked you. You can do this by: (1) saying And you? or What about you?; (2) repeating the question but stressing you: A: Where are you from? B: I'm from Rome. Where are you from?

2.2 Week 1 Lecture, Part 1: Getting to know you — questions and answers

Source: Week_1_Lecture.pdf, Part 1, Activity 1: Complete the questions in "Getting to know you" with a verb. The poster contains three blocks of numbered questions; the verbs are supplied below as the answer key, and each question is then a ready-made pair-work prompt.

2.2.1 You and your family

1. Where are you from? (given)
2. Where were you born? (given)
3. What languages do you ? — speak
4. Where do you ? — live (also possible: study)
5. Do you any brothers or sisters? — have
6. Do you any pets? — have

2.2.2 Your occupation and routine

7. What do you ? — do (i.e. What do you do? = What is your job/study?)
8. What time do you up during the week? — get
9. What do you usually lunch? — have (also: eat)
10. What do you usually in the evening? — do
11. What time do you usually to bed? — go
12. Where did you English before? — study (also: learn)

2.2.3 Your free time

13. What kind of music do you to? — listen
14. What TV programmes or series do you ? — watch
15. Do you any sport or exercise? — do (also: play)
16. What kind of books or magazines do you ? — read
17. How often do you to the cinema? — go
18. What did you last weekend? — do

Activity 2: Video.

Play the video by QR code

Scan the code with a phone camera — the clip (English File 5e Pre-Int,

---

1A: Gastón, Katerina, Ollie, Hellen and Mert answering the questions of Activity 1) opens straight in the browser. The same file sits in the course folder as ef5e_preint_1a_1_vocabulary.mp4.

A: Watch five people (Gastón, Katerina, Ollie, Hellen, Mert) answer questions from Activity 1. Write the numbers of the questions they answer.

B: Watch again. Then look at the question numbers and try to remember their answers.

C: Have a conversation with a partner. Ask and answer the questions in Activity 1. Try to return some of your partner's questions. — use Rule 7 (page 5): answer, then return the question with And you? or by restressing you.

2.3 Week 1 Lecture, Part 2: write sentences and questions with the Present Simple — solutions

Source: Week_1_Lecture.pdf, Part 2, Activity 1. Write sentences and questions with the Present Simple. Symbols: $(+)a$ffirmative, (−) negative, (?) question. The first item is given: he / usually get up late $\rightarrow$ He usually gets up late.

1. (?) Anna / like music — Does Anna like music? (does + subject + infinitive; Rule 2)

2. (+) my sister / have a lot of hobbies — My sister has a lot of hobbies. (have → has, Rule 3)

3. (−) I / get on very well with my parents — I don't get on very well with my parents.

4. (+) my nephew / study English at university — My nephew studies English at university. (consonant $+y \rightarrow -$ies, Rule 3)

5. (−) my neighbours / have any children — My neighbours don't have any children. (any in negatives)

6. (?) what time / the film start — What time does the film start?

7. (+) he / go out twice a week — He goes out twice a week. (goes, Rule 3; frequency expression at the end, Rule 6)

8. (−) we / often talk about politics — We don't often talk about politics. (adverb after don't, before the main verb, Rule 5)

9. (?) how often / you see your brother — How often do you see your brother?

10. (−) Sally / go on social media very much — Sally doesn’t go on social media very **much.**

2.4 Week 1 Lecture, Part 2: put the words in the correct order — solutions

Source: Week_1_Lecture.pdf, Part 2, Activity 2. The first item is given: go cinema we often the to → We often go to the cinema.

1. always before go I bed 11.00 to — I always go to bed before 11.00. (adverb before the main verb, Rule 5)

2. ever her Kate sees family hardly — Kate hardly ever sees her family. (hardly ever behaves like a frequency adverb)

3. Saturdays never shopping on go we — We never go shopping on Saturdays.

4. a to I dentist’s year go twice the — I go to the dentist’s twice a year. (frequency expression at the end, Rule 6)

5. in they breakfast sometimes bed have — They sometimes have breakfast in bed.

6. usually car I the listen the in radio to — I usually listen to the radio in the car.

7. in day park every Anton the runs — Anton runs in the park every day.

8. often late Laila is work for — Laila is often late for work. (adverb after the verb be, Rule 5)

9. often Ivan to go doesn’t theatre the — Ivan doesn’t often go to the theatre.

10. visit I once my month a mum — I visit my mum once a month.

2.5 Grammar activation: speaking and writing

Source: Week_1_Lecture.pdf, final page.

2.5.1 Activity 1: Speaking

Work in pairs. Find out about your partner’s habits. Ask questions with How often…? and these ideas. Answer using an adverb or expression of frequency. Model: A: How often do you eat out? B: About once a month. Idea list: be late for work/college; eat out in restaurants; check your phone for messages; play board games; go on holiday; check your emails; take public transport; be stressed at work. For practice, full model answers: How often are you late for college? — Never, or hardly ever.; How often do you check your phone for messages? — Constantly, about once every ten minutes.; How often do you go on holiday? — Usually once a year, in summer.; How often are you stressed at work? — Sometimes, before exams.

2.5.2 Activity 2: Writing and speaking

Work in groups. Prepare a questionnaire about lifestyle for another group. Start each question with How often…?, Are you often…? or Do you often…? and offer three choices of answer (A, B or C). Example item: How often do you cook dinner? A every day; B two or three times a week; C hardly ever.

2.6 TED Talk listening: “Stereotypes” — all questions

Source: TED_Talk_Questions_-_Stereotypes.pdf (Week 1 listening: a TED Talk by Olivia on stereotypes; timestamps refer to the talk).

The talk itself — by QR code

Scan to open the recording on ted.com: Olivia Markaryan, “Stereotypes: How do we break the cycle?” — the timestamps in the questions below (0:01–3:15) match this recording.If the link does not open on your device, search ted.com for Olivia Markaryan Stereotypes.

2.6.1 Video comprehension questions

Answer these questions based on the stories told in the video:

1. The Trip to France: What did people tell Olivia about French people before her trip (0:01)? What did she actually discover when she arrived there (0:27)?

2. The School Sport: What did a boy say to Olivia after she won a point in a sport (0:57)? How did his comment make her feel (1:09)?

3. Common Phrases: What are two common phrases Olivia mentions that can hurt boys or girls (2:22)?

4. Olivia’s Solutions: What are the three steps Olivia suggests to stop contributing to stereotypes (3:15)?

Suggested answers. (1) People warned her that French people would be rude and unfriendly — but when she arrived she discovered the opposite: people were kind and welcoming, so the stereotype was wrong. (2) After she won a point, a boy told her “you play like a girl” — meant as an insult; the comment made her feel hurt, small and angry that being a girl should be treated as something bad. (3) Phrases such as “you play like a girl” and “that’s not very ladylike” (similarly “man up”/“don’t cry” for boys) — phrases that box children into gender stereotypes. (4) Her three steps: call out stereotypes when you hear them; check your own assumptions before judging people; be the example — behave in the inclusive way you want to see (her closing quote: “You have to be the change you wish to see”).

2.6.2 Pair and group discussion questions

Use these questions to talk with your classmates:

1. Olivia says she was quick to judge others, just like others judged her (1:32). Have you ever made a quick assumption about someone that turned out to be completely wrong?

2. Have you ever felt that someone stereotyped you because of your age, your gender, or where you come from (1:44)? How did you react?

3. Do you hear phrases like “you play like a girl” (2:22) or “that’s not very ladylike” (2:52) in your school or country? Do you think these phrases change the way young people behave (2:37)?

4. Olivia’s first solution is to “call them out” when people use stereotypes (3:15). Is it easy or difficult to call out a friend who makes an unfair comment? Why?

5. Olivia gives examples of a short basketball player or a feminine woman with a black belt in Taekwondo (3:52). Can you think of another example where “looks can be deceiving” (4:06)?

6. The speaker ends with a famous quote: “You have to be the change you wish to see” (4:16). What is one small, practical change you can make today to make your classroom more inclusive (4:06)?

How to answer. These are opinion questions: answer with a personal story and support it in two or three sentences. A strong written answer uses the Week 1 grammar: “Last year I assumed my new classmate was unfriendly because he never spoke, but in fact he was simply shy. Now I try not to judge people before I talk to them properly.” Notice the past simple for the story and the present simple + frequency adverb for the conclusion.

3 Week 2 — Semester Planning; Present Simple vs Continuous; Articles

3.1 Grammar catalogue for Week 2

Week 2 has two grammar blocks: the tense review contrast present simple vs present continuous (from TENSE_REVIEW_3A and the Week 1 feedback strand) and the article system a/an, the, no article (from the Week 2 lecture panels 3.14–3.16 and the first page of Grammar_Worksheet_- _Articles.pdf).

3.1.1 Present simple (general time)

Time idea: GENERAL. Auxiliary: DO/DOES. Key words: never, rarely, hardly ever, sometimes, often, usually, always…

Use Form + ? –

General truths:	
Water boils at 100 °C. She works in London. I / you / we / they: work	Do I/you/we/they work? I/you/we/they do not (don’t) work
Habits, regular occurrences: They go to Florida every summer.	
he/she/it: works	Does he/she/it work? he/she/it does not (doesn’t) work

Table 7: Present simple (Tense Review 3A).

3.1.2 Present continuous (now)

Time idea: NOW. Auxiliary: BE (am/are/is) + -ING. Key words: now, at the moment, at present, currently, these days…

Use Form + ? –

Actions that last		
over time, actions in progress: He is listening to the radio.		
I: am (’m) working	Am I working?	I am not (’m not) working
Insistence, point of view, emotion: I am telling you that it doesn’t matter. you/we/they: are (’re) working; he/she/it: is (’s) working Are you/they working? Is he/she/it working? you/they are not (aren’t) working; he/she/it is not (isn’t) working		

Table 8: Present continuous (Tense Review 3A).

In the Business Grammar & Practice pages this contrast is organised into five semantic pairs, which are the examinable rules for Week 2: routine vs moment of speaking; general activities vs current projects; permanent vs temporary situations; facts vs slow changes; stative verbs vs action verbs.

3. Stative verbs. Verbs of thinking (think, know, mean, depend), feeling (want, like), senses (sound, taste) and possession are normally used in the present simple, even when talking about now: I think we ought to give the job to Mr Janousek.; What does this word mean?; It all depends. The present continuous of the same verb expresses a deliberate ongoing activity: We are interviewing people for the new post.; I am trying to translate this letter.

4. a/an — the indefinite article (worksheet rules page). Use a/an when first describing something, or making a general statement about something not known or without any details (Suddenly a man appeared outside the window.; That is an interesting point.); to give an example (A thermometer is used for measuring temperature.); to describe one of a class of things or people (Paula is an Italian. She’s a teacher. It’s a racing bike.); for rates and speeds (Some people can cycle at 50 km an hour. Phil earns €500 a month.). Use an when the word following begins with a vowel.

5. the — the definite article. Use the with things or people already mentioned (First, I take a test tube. Then into the test tube I pour 50 cc of water.); when a noun is made definite by details following it (That man outside was the man that the police were looking for.); when we definitely know what is being talked about (Are you going to the post office? Pass me the salt, please.).

6. Zero article. Use no article to describe something general or uncountable (Love makes the world go round. Water boils at 100 °C. Some people believe that men and women think differently.); with proper names (Kate lives in Manchester in a little street called Green Street.) though these can begin with the if they have details following them (This is Mary Smith. She is the Mary Smith I told you about.); with general examples, countable or uncountable (Doctors often have to work more than a hundred hours a week. Water is a scarce resource in many parts of the world.).

7. Article rules from the lecture panels (3.14–3.16). a/an with singular countable

nouns: (1) when we say what something is or what somebody does (She's a lawyer.); (2) the first time we mention a thing/person; (3) in exclamations with What…! (What an awful day!); (4) in expressions of frequency (three times a week). the: (1) when we talk about something we've already mentioned (I saw an old man with a dog. The dog was barking.); (2) when it's clear what we're referring to (The children are at school.); (3) when there's only one of something (The moon goes round the Earth.); (4) with places in a town, e.g. cinema, theatre (I'm going to the cinema tonight.); (5) with superlatives (It's the best restaurant in town.). No article: (1) when we are speaking in general with plural and uncountable nouns (I love flowers. Love is more important than money. — compare I love the flowers in my garden); (2) with some nouns, e.g. home, work, school, church, after at/to/from (She's not at home today.); (3) before meals, days, and months (I never have breakfast.); (4) before next/last + day, week, etc. (See you next week.).

8. Language of opinion (lecture information box). We often use should(n't) + verb to say what we think is the right thing or a good thing (to do): Personally, I don't think people should need a driving licence…; In my opinion, e-scooters are…; But I think people should have to…

9. Language of generalizing (lecture information box): Generally speaking, I think it's true that…; In general, they behave in a more grown-up way.; On the whole, I think that only children are more independent…; They tend to spend a lot of time by themselves.; They aren't always very good at…

3.2 Week 2 Lecture, Part 1: speaking — giving your opinion

Source: Week_2_Lecture.pdf, Part 1 (coursebook pages 6, audio 3.12–3.13). Statement on the slide: "People should need a driving licence to ride an electric scooter."

Where to get audio 3.12–3.13

These tracks belong to the coursebook audio set and are not stored in the course folder; the instructor

---

plays them from the coursebook platform, or you can request them with the coursebook access code.

The recordings that are stored in the course folder—the English File video, the TED Talk sheet

video, the BBC Radio 2 discussion and the 60-second forum extract—are all reachable by QR codes

in the media library (§1.4, p. 5).

---

1. 3.12 Listen to two people talking. Do they agree or disagree with the statement? — Expected answer: the two speakers disagree with the statement: one argues e-scooters are slow and harmless, the other that they are dangerous. (Any supported answer is acceptable; the key point is to justify with should(n't).)

2. 3.13 Listen to some extracts from a. Complete the gaps in the information box "Giving your opinion".

a) , I don't think people a driving licence. . . b) In , e-scooters are. . . c) But I think people to ride them…

Answers. (a) Personally / To be honest; should need — Personally, I don't think people should need a driving licence. (b) In my opinion / In my view — In my opinion, e-scooters are dangerous. (c) should have to wear a helmet / should be allowed — But

I think people should have to pass a test to ride them. The grammar point: the box trains should(n't) + infinitive for opinions (Rule 7, §3.1).

1. c) Look at the statements below. Tick (☐) the ones you agree with and cross (X) the ones you disagree with. Think about your reasons.

2. d) In groups, take turns to give your opinions on a statement in c. Do the others in the group agree or disagree with you? Use the language from the information box.

Statement list (verbatim): People who drink and drive should lose their driving licence for life, even if they did not cause an accident. / Slow drivers cause more accidents than fast drivers. / Speed cameras do not stop accidents, they just make money for the government. / Drivers who are over 80 are as dangerous as young drivers. / Cyclists in cities should only be allowed in cycle lanes, not where cars and other vehicles drive. / It should be illegal to eat or drink when you're driving. / The minimum age for riding a motorbike should be 25. / The speed limit on motorways should be lower.

3.3 Week 2 Lecture, Part 2: reading — "Generalize, but don't stereotype!"

Source: Week_2_Lecture.pdf, Part 2 (adapted from the Everyday Sociology Blog). Tasks before the text: a) Look carefully at the book illustration. What is happening? What stereotype is it challenging? Why do you think stereotypes are harmful? b) Read an article from an American sociology website and check your ideas in a. What's the difference between a stereotype and a generalization? The full article text:

Generalize, but don't stereotype!

We use generalizations to help us to understand things and people. Generalizations are based on facts and evidence. For example, if we see a flat surface with four legs, we generalize that it's a table because most objects like this are tables. If we see someone who looks over 80 years old, we generalize that they are retired because most people at this age don't work any more. Unfortunately, sometimes generalizations can become stereotypes: a stereotype is a harmful and often negative generalization. We typically stereotype people or things that we do not understand or that we know nothing about. Stereotyping is something to avoid, because it can come from ideas about these groups, not truths. For example:

- It's not appropriate to stereotype based on what people look like. For example, you

may assume from their appearance that someone is male, female, white, Afro-Caribbean, Asian, or Latin American. You may be right, but you may also be wrong.

- It's not appropriate to stereotype based on what you think you know about how particu-

lar groups of people behave. For example, an outdated gender stereotype is that strong, handsome men save weak, pretty women from danger. Others are that men don't do housework and women can't read maps. However, these abilities are not related to a person's gender; they are individual abilities related to individual people. Generalizing helps us to navigate our lives, but stereotyping should be avoided because it can easily result in prejudice and discrimination, and can mean that some people cannot achieve their full potential in society.

1. c) Read the article again and match 1–4 to A–D.

a) Generalizing is useful because it helps us to…b) Stereotyping is a problem because it is based on…c) It's wrong to make assumptions about people based on things like…d) Generalizing is neutral, but…

Options: A stereotyping is negative. B ideas that are not true. C understand the world around us. D appearance, ethnicity, or gender.

2. d) Do you think people are more aware now than in the past of the harmful effects of stereotyping? Think of an example.

Answers (c): $1 \rightarrow C$(a generalization is based on facts and evidence and helps us understand the world); $2 \rightarrow B$(a stereotype "can come from ideas about these groups, not truths"); $3 \rightarrow D$ (appearance and gender are exactly the two cases the article calls inappropriate); $4 \rightarrow A$("generalizing is neutral, but stereotyping is negative"). Answer (d), model: Yes, I think people are more aware today. For example, advertising and children's books now show engineers and doctors of many genders and nationalities, and most young people immediately challenge phrases like "you play like a girl". Twenty years ago such phrases usually passed unchallenged.

3.4 Week 2 Lecture, Part 3: articles quotes — solutions

Source: Week_2_Lecture.pdf, Part 3, task a: Quotes often express generalizations. Complete these quotes about education with a / an, the, or — (no article).

1. " child educated only at school is uneducated child." (George Santayana, Spanish philosopher) — "A child educated only at — school is an uneducated child." (first mention: a child; school used uncountably, "at school"; an before a vowel sound.)

2. " greatest university of all is collection of books." (Thomas Carlyle, Scottish philosopher) — "The greatest university of all is a collection of — books." (superlative → the; a collection; general plural books.)

3. " extremists have shown what frightens them most: girl with book." (Malala Yousafzai, Pakistani educator) — "— extremists have shown what frightens them — most: a girl with a book." (general plural, superlative adverb with zero article, first mentions.)

4. "Until we get equality in education we will not be equal society." (Sonia Sotomayor, American lawyer) — "Until we get — equality in — education we will not be an equal society." (uncountable abstract nouns; an + adjective + singular noun.)

5. "Having one child makes you parent. Having two, you are referee." (David Frost, British journalist) — "Having one child makes you a parent. Having two, you are a referee." (a member of a class)

Task b: Which ones do you agree with? Which quote(s) do you like best? — pair discussion; answer freely, e.g. I like Malala's quote best because one girl with a book really frightened an entire extremist system.

3.5 Week 2 Lecture, Activity 1: circle the correct form — solutions

Source: Week_2_Lecture.pdf, Activity 1. The first item is given: I love weddings / the weddings!

1. Ariana is nurse / a nurse in a hospital. A hospital / The hospital is a long way from her house. — a nurse; The hospital. (a member of a class; a specific hospital already known to both speakers.)

2. What a horrible day / horrible day! We'll have to eat our picnic in the car / a car. — a horrible day; the car. (exclamation with What…!; the specific car they arrived in.)

3. My wife and I like love stories / the love stories, but our children prefer the war films / war films. — love stories; war films. (general plural = zero article.)

4. We go to theatre / the theatre about once a month / once the month. — the theatre; once a month. (place in a town; a in frequency expressions.)

5. I'm having dinner / the dinner with some friends the next Friday / next Friday. — dinner; next Friday. (meals take no article; next + day.)

6. My boyfriend is chef / a chef. I think he's the best cook / best cook in the world. — a chef; the best cook. (profession; superlative.)

7. I'm not sure if I closed the windows / windows before I left the home / home this morning. — the windows; home. (specific windows of the house; fixed expression at/from home → left home.)

8. In general, I like dogs / the dogs, but I don't like dogs / the dogs that live next door to me. — dogs; the dogs. (general plural vs. dogs defined by the relative clause.)

9. I got to the school / school late every day the last week / last week. — school; last week. (school as an institution after get to; last + day/week.)

10. I think happiness / the happiness is more important than money / the money. — happiness; money. (uncountable abstract nouns in general statements.)

3.6 Week 2 Lecture, Activity 2: complete with a/an, the, or — (no article) — solutions

Source: Week_2_Lecture.pdf, Activity 2. Model given: A: What does the guidebook say about Pizzeria Marco? B: It says that it's a great restaurant.

1. A: How often do you go to gym? B: About three times week. But I never go on Fridays. — the gym; a week; — Fridays.

2. A: What time does train leave? B: In 40 minutes. Can you drop me off at station on your way to work? — the train; the station; — work.

3. A: What amazing dress! B: Thanks. I bought it in sales

last month. — an amazing dress; the sales; — last month.

4. A: What's most interesting place to visit in your town? B: Probably castle. It's oldest building. — the most interesting place; a castle; the oldest building. (superlative → the.)

5. A: What shall we do next weekend? B: Let's invite Toni for lunch. We could eat in garden. — — next weekend; — lunch; the garden. (our garden = specific.)

6. A: Do you like cats? B: Not really. I prefer dogs. I think they're

best pets. — — cats; — dogs; the best pets.

7. A: Is your mum housewife? B: No, she's teacher. She's always tired when she finishes work. — a housewife; a teacher; — work.

8. A: Have you ever had problem in your relationship? B: Yes, but we solved problem and we got married. — a problem; the problem. (first mention → a; second mention → the.)

9. A: When is meeting? B: They've changed date. It's on

Tuesday now. — the meeting (a specific, known meeting — also accepted a meeting in some keys); the date; — Tuesday.

3.7 Week 2 Lecture, Part 4: generalizing — listening and discussion

Source: Week_2_Lecture.pdf, Part 4 (audio 3.18–3.19). Statement on the slide: “Only children are more self-confident than children with brothers and sisters.” (Audio availability: same as tracks 3.12–3.13, see the note in §3.2, p. 12; all folder media is linked by QR codes in §1.4, p. 5.)

1. 3.18 Listen to three people talking. Do they agree or disagree with the statement?

2. 3.19 Listen to some extracts from a. Complete the gaps in the information box “Generalizing”.

a) , I think it’s true that… $b)$ In , they behave in a more grown-up way. c) the whole, I think that only children are more independent… $d)$ They to spend a lot of time by themselves. e) They aren’t very good at…

Answers (information box): (i) Generally speaking; (ii) In general; (iii) On the whole;

(iv) They tend to spend; (v) They aren’t always very good at. These five phrases are the target generalizing language of the week (Rule 8, §3.1).

1. c) Work in groups of three. Take turns to talk about the statements. Use the language from the information box. Statement list (verbatim): Children shouldn’t be allowed to use the internet by themselves until they are 12 years old. / Going to the cinema is much better than watching films on TV. / Working from home is more enjoyable than going to work. / Breakfast is the most important meal of the day. / It’s important to exercise at least three times a week. / Being a teacher is the most stressful job in the world. / Cats make better pets than dogs, especially for older people. / Art and music are subjects that are not worth studying at university.

Model answers (using the target language): Generally speaking, I think going to the cinema is better than watching films at home, because the big screen and the audience make the film more exciting. / On the whole, working from home is more enjoyable because you don’t waste time commuting, although you miss your colleagues. / In general, cats make better pets for older people because they tend to be quieter and easier to look after than dogs.

3.8 Grammar Worksheet: Present Simple and adverbs of frequency — exer- cises and solutions

Source: Grammar_Worksheet_-_Present_Simple_and_Adverbs_of_Frequency.pdf. The rules page is reproduced in the catalogue above (Rules 1–6, §2.1).

3.8.1 Exercise 1: complete with the present simple form of the verbs

1. Sam (not live) near me.
2. Sofia (drive) to work.
3. she (speak) any other languages?
4. I (not like) waking up early.
5. they (see) each other at the weekends?
6. We (be) very tired.

7. Some people (not need) a lot of sleep.
8. (be) your bus late?
9. He (have) a big house in the country.

Answers: (1) doesn’t live; (2) drives; (3) Does she speak; (4) don’t like; (5) Do they see;

(6) are; (7) don’t need; (8) Is; (9) has. Each answer follows Rules 1–3: do/does-support for negation and questions, -s after he/she/it, has for have.

3.8.2 Exercise 2: find and correct five mistakes with the position of frequency adverbs and time expressions

1. I often am tired at work.
2. We twice a week eat out in a restaurant.
3. Do you often check your phone for messages?
4. She is never late to my lesson.
5. I have two or three times a day a cup of coffee.
6. They don’t play often board games.
7. Does usually she take public transport?

Answers. Sentences 3 and 4 are correct; the other five must be corrected: (1) I am often tired at work. (adverb after be); (2) We eat out in a restaurant twice a week. (expression of frequency at the end); (5) I have a cup of coffee two or three times a day. (expression at the end); (6) They don’t often play board games. (adverb after don’t, before the main verb); (7) Does she usually take public transport? (adverb after the subject).

3.8.3 Exercise 3: complete the text with words from the boxes

Box A (frequency words and phrases): always, every day, never, often, rarely, two or three times a month, usually. Box B (verbs): eat, get up, go, have, leave, make, meet. Use one word from Box A and one verb from Box B in each gap; you do not need all the words.

The text

I 1 2 at about 7.30 a.m. and get ready for work. I 3 4 breakfast because I don’t feel hungry in the mornings. I start work at 9 a.m. and at 12 I have a lunch break. I 5 6 my friend for lunch — normally two or three times a week. At 1.30 I start work again and finish at 5.30 p.m. I like to keep fit, so I 7 8 to the gym. I get home at about 8.00 p.m. and make dinner, but I also 9 at restaurants 10 . I’m always tired in the evenings so I go to bed early. And that’s my day!

Answers: (1) usually $+(2)$ get up; (3) never $+(4)$ have; (5) often $+(6)$ meet; (7) usually $+(8)$ go; (9) eat; (10) two or three times a month. Unused: always, every day, rarely, leave, make. Note the grammar behind each choice: the frequency word sits before the main verb (Rule 5) and the frequency phrase goes at the end (Rule 6).

3.9 Business Grammar & Practice: present simple vs present continuous — all five exercises and solutions

Source: BusinessGramPractice_-_Present_simple_vs_Continuous.pdf (Duckworth, Business Grammar & Practice, pages 16–17, unit “Present simple vs present contin-

uous”). Decide for every verb whether the meaning is general/permanent (present simple) or current/temporary (present continuous).

3.9.1 Exercise 1 — Routine vs moment of speaking

Decide if the speaker is talking about routine activities or activities going on at the moment of speaking. Put the verbs into the present simple or the present continuous. See the example.

An interview with Bill Cogges in the dairy business

Interviewer: 1Do you usually organize (you/usually organize) the delivery of milk to the factory? 2 (the farmers/bring) it here themselves? Bill: No, 3 (we/always collect) the milk ourselves, and the tankers 4 (deliver) it to the pasteurization plant twice a day. Interviewer: What sort of quality control procedures 5 (you/have)? Bill: As a rule we 6 (test) samples of every consignment, and then the milk 7 (pass) down insulated pipes to the bottling plant, which 8 (operate) 24 hours a day. I’ll show you round a bit later, but the production line 9 (not work) at the moment because the employees 10 (change) shifts.

Answers: (1) Do you usually organize (example); (2) Do the farmers bring (routine); (3) we always collect (routine; adverb before the main verb); (4) deliver (routine); (5) do you have (permanent state); (6) test (as a rule signals routine); (7) passes (general truth about the process); (8) operates (permanent); (9) isn’t working (at the moment → present continuous); (10) are changing (happening now).

3.9.2 Exercise 2 — General activities vs current projects

We set up the company in 2002 . . .

We set up the company in 2002 with a grant from the local government. We 1provide (provide) IT backup and support for a number of small and medium-sized businesses in the area. We also 2 (design) web sites for local companies, and we 3 (look) after them by doing regular maintenance, and so on. When we 4 (get) a new customer, we always 5 (spend) a long time talking to them to find out their needs. At the moment we 6 (set up) a website for a large local travel agency, and in fact our chief programmer is in charge of that project. She 7 (have) discussions with them to find out what sort of features they 8 (require).

Answers: (2) design (general activity); (3) look; (4) get (whenever-clause → present simple); (5) spend; (6) are setting up (at the moment); (7) is having (ongoing now); (8) require (stative verb → simple even now, Rule 4).

3.9.3 Exercise 3 — Permanent vs temporary situations

1. He joined the company 25 years ago and he still works (work) for us. (example)
2. We (not/send) out any orders this week because we’re waiting for the new lists.
3. I (deal) with Mr Matsumi’s clients this week because he’s away.
4. Go down this road, turn right, and the road (lead) straight to the industrial estate.
5. Because of the Euro/Dollar exchange rate, EU exports (not/do) very well at the moment.
6. The stock market is risky because the price of shares (vary) according to economic conditions.

7. I (learn) French because I’m going to be based in the Paris office next year.

8. Hello. I’m Heinrich Brandt, I’m German, and I (come) from a small town near Munich.

Answers: (2) aren’t sending (temporary — this week); (3) am dealing (temporary — this week); (4) leads (permanent fact about the road); (5) aren’t doing (temporary — at the moment); (6) vary (permanent characteristic); (7) am learning (temporary, time-limited plan); (8) come (permanent fact about himself).

3.9.4 Exercise 4 — Facts vs slow changes

In the following newspaper article, decide whether the verbs refer to general statements about change, or to changes that are currently taking place.

Governments cannot last for ever

Governments cannot last for ever. Normally political parties 1enjoy (enjoy) a period of great popularity in their early years, then they 2 (go) through a period of stability and 3 (put) their ideas into practice. After that, they 4 (run) out of ideas, and the opposition 5 (take) power. Now it 6 (seem) that the present government 7 (begin) to run into difficulties, and people 8 (start) to criticize the Prime Minister. The newspapers 9 (attack) other ministers because of the state of schools, public transport and hospitals, and the government 10 (lose) popularity.

Answers: (2) go; (3) put; (4) run; (5) takes (all general statements → present simple); (6) seems (stative verb, Rule 4); (7) is beginning; (8) are starting; (9) are attacking; (10) is losing (changes currently taking place → present continuous).

3.9.5 Exercise 5 — Stative verbs

In each of the following sentences, put one of the verbs into the present simple and the other into the present continuous. See the example.

1. We are interviewing (interview) people from outside the company for the new post in the export department, but I think (think) we ought to give the job to Mr Janousek. (example)

2. At the moment we (carry) out a survey to find out what sort of after-sales service our customers (want).

3. We’ve got a competition on at work to find a name for our new range of cosmetics. The marketing people (try) to find a brand name that (sound) natural and sophisticated.

4. (you/know) what Mrs Ericson (do)? She’s not in her office and nobody has seen her since lunch.

5. Could you help me? I (try) to translate this letter from a Spanish client and I don’t know what this word (mean).

6. I (apply) for a transfer to our London office, but I don’t know if I’ll be successful. It all (depend) on whether or not they have any vacancies.

7. Their new ‘own brand’ instant coffee (taste) very good, so it isn’t surprising that it (become) more and more popular.

Answers: (2) are carrying / want; (3) are trying / sounds; (4) Do you know / is doing; (5) am trying / means; (6) am applying / depends; (7) tastes / is becoming. In every

line the action in progress takes the continuous (carry out, try, do, apply, become) while the stative meaning takes the simple (want, sound, know, mean, depend, taste). This is Rule 4 of the Week 2 catalogue and the classic Test 1 trap.

4 Week 3 — Numbers and Everyday Quantification; Quantifiers

4.1 Grammar catalogue for Week 3

Week 3 teaches quantification twice over: the grammar of quantifiers (the Week 3 worksheet, pages on much, many, few, little, enough and none, all, each, every and both, either, neither) and the language of numbers (the Week 3 lecture, Part 4). The rules below reproduce every use-note from those sources.

4.1.1 Quantifiers with countable and uncountable nouns

4.1.2 Quantity: none, all, each, every

1. no — with a noun to describe zero quantity or mass: No animal can live for long without water.

2. none of — to mean ‘not one’ of a group: None of the students had done the work.

3. none — to mean ‘not any’ or ‘not one’ with countables or uncountables: Countable: We looked for some chairs, but there was / were none free. Uncountable: I thought we had some milk, but there is none left. (singular verb)

4. all (of) — with a plural noun and verb, often in contrast with some: All animals need water to live. Not all the cabbages were eaten. Some were left. Also after be or an auxiliary verb: You are all wrong. You have all made a mistake. You must all be more careful. Note: all of has the same meaning (Wild rabbits have eaten all of our / the cabbages.). As a pronoun at the beginning of a sentence: All I could see was hundreds of bats. Note: everything is more usual as an object (I want to know everything that happened.).

5. most (of) — to mean ‘nearly all’: Most mammals have hair. Wild rabbits have eaten most of our / the cabbages.

6. each (of) — the separate members of a group: We put 50 cc of water in each test tube. Note: each of is also possible (We put 50 cc of water in each of the test tubes / each of

Quantifier Use Example from the worksheet

how many	questions about quantity with countable nouns How many tigers are there in the world today?	
how much	questions about mass with uncountable nouns How much water is there on Earth?	
not many	negative statement about quantity of countables There aren’t many tigers left in the world today.	
not much	negative statement about mass of uncountables If we want to save the tigers, there isn’t much time left.	
many / much	positive statements in formal or written language Many people hunt wild animals for sport. Much damage has been caused by this kind of hunting.	
a few	a small number of countables in a positive way We managed to see a few tigers in the distance.	
a little	a small amount of an uncountable in a positive way There is a little water left in this bottle.	
a lot (of), lots (of)	a large number of countables or a large amount of an uncountable We saw a lot of / lots of animals close up. There was a lot of / lots of rain last month.	
few, very few, only a few	countables in a negative way	Unfortunately few conservationists believe that tigers in the wild have a future. …there will be very few remaining. There are only a few biscuits left.
little, very little, only a littleuncountables in a negative way	There is little hope that tigers will survive, as they have very little space for their natural habitat. I’m afraid there is only a little water left.	
too many	countables — more things than are necessary or possible There are too many stars for scientists to count.	
too much	uncountables — a greater quantity than is necessary or possible Some plants are damaged by too much sunlight.	
enough (of)	the quantity or number is sufficient Have we got enough food? Have we got enough? There are enough plates for everyone. We’ve got enough (of them).	
not enough	the quantity or number is not sufficient There is not enough information about this problem, and there are not enough scientists working to try and find a solution.	
plenty of	more than enough	Don’t worry, we have plenty of time. I’ve got plenty of pens if

Table 9: Quantity: much, many, few, little, enough (Week 3 Grammar Worksheet, page 1).

them.); with one (There were five test tubes, and we put 50 cc of water in each one.); after a subject or at the end of a sentence (The members of the team each received a medal.).

7. every — with a singular noun, to mean all the members of a group together: Every person in the class took part in the play.

8. whole — to mean ‘all of something’: You’d better tell me the whole story from the beginning. The whole class clapped and cheered.

9. both (of) — to refer to two things, with a plural noun and verb: Both books were written in 1985. (plural noun + verb) You are both wrong. (after be) You have both made a mistake. (between auxiliary and participle) You must both be more careful. (between modal and verb) Both of the pencils were broken. / Both of my pencils were broken. (both of + the + plural noun / possessive) Both of you are wrong. (both of + pronoun)

10. either (of) — to mean ‘this or the other’, with a singular noun and verb: There are two methods. Either method will give results. With the + plural noun, Either of is a pronoun form: Either of the methods will give results. You can use either of them.

11. neither (of) — to mean ‘not this or the other’: These are incorrect answers. Neither is correct. With the + plural noun, Neither of is a pronoun form: Neither of the answers is correct. Neither of them is correct.

4.1.3 Quantifiers: the lecture panel (large / small / zero quantities)

12. Large quantities. We use a lot of or lots of in affirmative sentences; we can also use loads of, but it’s more informal (My daughter has a lot of apps on her phone. Nina has lots of clothes. I’ve been there loads of times.). We use a lot when there is no noun (James eats a lot. — not He talks a lot of). Much / many are normally used in negatives and questions, but a lot of can also be used (Do you have many close friends? Don’t eat much chocolate.). We use plenty of in affirmatives (= more than enough; Don’t run. We have plenty of time.).

13. Small quantities. We use little + uncountable nouns, few + plural countable nouns; a little and a few = some, but not a lot (B: Just a little, please. The town only has a few cinemas. I’m so busy that I have very little time for myself.). Very little and very few = not much / many (Sarah isn’t popular and she has very few friends.). Less + uncountable, fewer + plural countable than used to have (There are fewer flights in the winter than in the summer.). The comparative of little is less and the comparative of few is fewer.

14. More or less than you need or want. We use too + adjective or adverb (I don’t like this city. It’s too big and it’s too noisy. You’re speaking too quietly — I can’t hear you.); too much + uncountable and too many + plural countable nouns (There’s too much traffic and too much noise. There are too many tourists and too many cars.); we use (not) enough before a noun, e.g. (not) enough eggs / milk, and after an adjective (It isn’t big enough) or an adverb (You aren’t walking fast enough); the buses don’t run frequently enough.

15. Zero quantity. We use any + uncountable or plural noun for zero quantity with a negative verb (There isn’t any milk in the fridge. We don’t have any eggs.); we use no + uncountable or plural noun with an affirmative verb (There’s no milk in the

fridge. We have no eggs.); we use none (without a noun) in short answers (A: How many eggs do we have? B: None. I've used them all.).

4.1.4 Talking about numbers (Week 3 lecture, Part 4)

16. Types of numbers (Section A). A series or set of numbers is a group of numbers

$$\text{together}: 1, 3, 5, 7... = \text{odd numbers}; 2, 4, 6, 8... = \text{even numbers};$$
$$2, 3, 5, 7, 11... =$$

prime numbers (numbers that cannot be divided by any other number, apart from themselves and 1). An approximate number is one which is roughly correct but is not the precise or exact number — work out the approximate answer in your head, then use a calculator to find the exact number. A discrete number or unit is something which is separate and cannot be divided into smaller numbers or units of the same thing. An aggregate is a number reached by totaling a set of numbers = the total (the average exam mark is calculated by taking the aggregate of all the marks and dividing by the number of exam entries). A random number is one chosen by chance, i.e. you cannot predict it.

17. Working with numbers (Section B). The word figure is often used to refer to the symbol used for a number — write the total number in words and figures. You can calculate 1 a number, estimate 2 a number, round a number up/down 3 and total 4 a set of numbers. Numbers can tally 5 (My figures don't seem to tally with yours.); you can also deduct 6 one number from another. Values are individual numbers in a set of data (The graph shows the temperature values for different months of the year.); variables are characteristics that can take on different values for different members of a group or set being studied. The incidence of something refers to how frequently it occurs (The incidence of twins in the population is growing.). When talking about numbers, magnitude simply refers to the size of something — write down the numbers in order of magnitude, beginning with the smallest. When making calculations it is a good idea to make an estimate 7 first of what the answer is likely to be; then you will see if your final answer is in the right area 8 or not. Exam candidates are often advised to show their workings 9 so that the marker can see how they arrived at their answer. Footnote gloss: 1 work out; 2 make a rough guess at; 3 make a fraction, e.g.1/6 or 0.78, into the nearest whole number; 4 add up; 5 match, agree; 6 take away, subtract; 7 rough guess; 8 approximately the same; 9 all the calculations leading up to an answer.

18. Describing proportions (Section C). Academic texts describe parts of a whole with: the majority (56%) of those questioned; the highest percentage of smokers; the highest proportion of smokers; only two per cent of the US population; This small fraction of the population; only a small minority of US workers (around 5%). Usage note — per cent, percentage and proportion: use per cent or % after a number (five per cent of the population; inflation rose by two per cent); use percentage or proportion to talk more generally about a quantity (the highest percentage of smokers; only a small percentage of students; a high/large proportion of patients; a relatively small proportion of total spending).

19. Talking about averages (Section E). When looking at data, it is useful to have some idea of a typical value for the data; this is usually called an average. If the data is from a sample, you can use the average of the sample to estimate the average for the whole population. When people talk about averages they are usually talking

about the mean: the mean is obtained by calculating the total of all the data values and then dividing by the number of data values. In a formula:

mean = total of all the data values number of data values .

(Source note in the handout: adapted from Procter-Green & Winters, 2009, AQA Statistics GCSE.)

4.2 Week 3 Lecture, Part 1: listening — a day without power

Source: Week_3_Lecture.pdf, Part 1 (audio 9.9: Chris Stokel-Walker, a journalist from The Times, describes his experiment of living for a day with no power).

Where to get audio 9.9–9.10

Like the Week 2 tracks, audio 9.9 and 9.10 come from the coursebook audio set and are played by

the instructor from the coursebook platform. What is stored in the course folder for Week 3 is the

60-second forum extract below — scan and listen on your phone. The full QR overview of all media

is in §1.4, p. 5.

Bonus listening (Week 3 listening strand) — by QR code

A 60-second forum extract on exchange and development from the course

media folder (Forum60sec_...deve.mp3): listen once for the gist, then

again and note every word connected with money, trade and growth—

good warm-up practice before audio 9.9.

1. a) Imagine there was a power cut in your house. What would you find it most frustrating not to be able to do?

2. b) 9.9 Listen. What part of the day do you think he found the most difficult? On the whole, would you say it was a positive or a negative experience for him?

3. c) Listen again. What things couldn't Chris do during his day without power? Make notes for each of these times: (1) 7 a.m. – 9 a.m.; (2) 9 a.m. – midday; (3) midday – 2 p.m.; (4) 2 p.m. – 6 p.m.; (5) 6 p.m. onwards.

4. d) Read some of the expressions Chris uses. What do the bold verb phrases mean? (1) I read the news on my tablet and the battery life drops from 65% to 55% in a few minutes. (2) Skype calls really drain the power. (3) I close down unnecessary programs and turn the brightness of my screen down to its lowest level. (4) Finally, my laptop battery dies just after lunch. (5) Thankfully, I can continue to work in the cloud on my phone. (6) Two and a half years ago, he decided to live off-grid.

5. e) Discuss the questions. (1) Are power cuts frequent where you live? What causes them? (2) Think of a time when you've been without power at home. What did you find difficult? Was there anything you liked about not having power? (3) Do you ever suffer from 'battery anxiety'? How low does the battery need to go for you to start worrying? (4) What do you think about people like Chris's friend Joel, who live off-grid? Is it good to live without technology?

Answers (d), verb phrases: (1) drops from 65% to 55% = falls, decreases from one level to another (a key trend verb, reused in Week 4); (2) drain the power = use up the

battery's energy completely; (3) close down = shut programs that are running; (4) the laptop battery dies = the battery becomes empty and the laptop stops working; (5) work in the cloud = work online using internet storage and services rather than files stored on the device; (6) live off-grid = live without connection to public utilities (electricity, gas, water) or, by extension, without technology. For (b) and (c) accept any answer supported by the recording; typical notes mention that he could not cook breakfast, use the lift, charge devices, do his job normally or heat food, and that the evening was the most difficult part.

4.3 Week 3 Lecture, Part 2: quantifiers — lead-in, Activity 1 and Activity 2 with solutions

Source: Week_3_Lecture.pdf, Part 2.

4.3.1 Lead-in (audio 9.10)

a) With a partner, read sentences 1–6 and think about what the missing words could be. Don't write them in yet. b) 9.10 Now listen and complete the sentences in a. Did you guess correctly?

1. I used to have of different gadgets, but now I use my phone for almost everything.
2. I'd like to have a better computer, but I don't have to buy one right now.
3. I spend time online. I think I need to take a break.
4. I have a lot of friends on social media, but only of them are close friends.
5. I never watch TV or films on my phone, because the screen isn't .
6. I like Apple products, but I can't afford them — I think they're .

Answers (from the recording; the expected quantifier language): (1) a lot (of); (2) enough money; (3) too much; (4) a couple (or a few); (5) big enough; (6) too

expensive. The sentences recycle Rules 12–14 of the catalogue (a lot of, enough, too much, too + adjective).

4.3.2 Activity 1: circle the correct word or phrase — tick if both are possible

The first item is given: My husband has too much / too many gadgets → too many (countable plural).

1. I just have to reply to a few / a little emails.
2. Do you spend much / many time on social media?
3. My bedroom is a nice size. There's enough room / plenty of room for a desk.
4. I know very few / very little people who speak two foreign languages.
5. My brother has downloaded a lot of / lots of apps onto his new phone.
6. I have some cash on me, but not a lot / a lot of.
7. Their new TV is too much big / too big. It hardly fits in the living room.
8. There aren't any / There are no potatoes. I forgot to buy some.
9. My niece isn't old enough / enough old to play with a games console.
10. I don't have a lot of / many close friends.

Answers: (1) a few (emails is countable); (2) much (time is uncountable, and it's a question); (3) both are possible (— enough room = sufficient, plenty of room = more than enough, both fit 'a nice size'); (4) very few (people is countable); (5) both are possible ( ); (6) a lot (after not we use a lot without of because there is no noun); (7) too big (too + adjective; too much never precedes an adjective); (8) both are possible (— any + negative verb, no $+a$ffirmative verb); (9) old enough (enough follows the adjective, Rule 14); (10) both are possible (; many is slightly more formal).

4.3.3 Activity 2: are the highlighted phrases right ( ) or wrong (X)? Correct the wrong ones

The first two items are given: My nephew got lots of video games for his birthday. I don't post much photos online. → many photos.

1. 'How many presents did you get?' 'A lot of!'
2. I buy fewer e-books than I used to because I prefer physical books.
3. There isn't no time to walk there. We'll have to get a taxi.
4. Please turn that music down. It's too much loud!
5. There aren't many good programmes on TV tonight.
6. My broadband isn't enough fast for me to download films easily.
7. I get too much emails at work. It takes me ages to read them all!
8. A: How much fruit do we have? B: Any. Can you buy some?
9. There are only a little people that I can talk to about my problems.
10. Katarina has plenty of money, so she always has the latest phone.

Answers: $(1)X \rightarrow A$ lot! (a lot of must be followed by a noun; in short answers use a lot); (2) (fewer + countable); $(3)X \rightarrow$ There isn't any time / There's no time (double negative impossible, Rule 15); $(4)X \rightarrow$ too loud (too + adjective); (5) ; $(6)X \rightarrow$ isn't fast enough (enough after the adjective); $(7)X \rightarrow$ too many emails (countable); $(8)X \rightarrow$ None (zero quantity in short answers, Rule 15); $(9)X \rightarrow$ only a few people (people is countable); (10) (plenty of = more than enough).

4.4 Week 3 Lecture, Part 3: reading — "8 ways to tidy up your digital life"

Source: Week_3_Lecture.pdf, Part 3. Introductory tasks: a) Work with a partner and answer the questions. Who has a more organized digital life? (Approximately how many emails do you have in your inbox? Do you organize them into folders? — How often do you add new apps on your phone or delete old ones? — How many photos do you have on your phone? Are they organized into albums? How quickly could you find a photo you wanted to show someone? — How many friends do you have on social media? How many of them are real friends? Do you ever unfollow your friends? — How many people in your 'contacts' have you not contacted in the last year? — How many different passwords do you have? How do you remember them? — Do you accept cookies when you visit new websites? Why (not)? How often do you unsubscribe from marketing emails? — What do you do with your old digital devices, e.g. old phones, tablets, etc.?) b) Look at the title of the article and the headings. Tick ( ) the areas of your digital life that you think you need to tidy up. c) Read the article and complete the gaps with a verb from the list: answer, click, find, forget, free up, keep, recycle, update.

8 ways to tidy up your digital life

A clean, tidy room makes you feel better about your home. In the same way, a tidy phone, tablet, or computer makes you feel better about your digital life. So if your digital life is a mess, try these tips — the benefits are huge. 1. Inbox messages. Most people have too many emails in their inbox. You don't have hundreds of unopened or unanswered letters in your house, so why should you have hundreds of unopened or unanswered emails? If you can answer an email in less than two minutes, do it right away. If it will take longer, don't leave it in your inbox — move it into a 'work in progress' folder and reply later.

2. Old software or apps. Uninstall software or apps that you don't use. This will free up a lot more space on your hard drive or phone.

3. Photos. You wouldn't put bad photos in a physical photo album, so don't keep bad photographs (or videos) on your phone — just delete them. Having poor-quality photos just makes it more difficult to find a good photo when you need one.

4. Friends. Having too many friends on social media makes it more difficult to keep in touch with the ones you really care about. You can 'unfollow' friends without them knowing, so you won't hurt their feelings.

5. Contact information. Update contact information regularly and delete contacts you no longer need. Most people don't do this often enough.

6. Passwords. Use a password manager app, like 1Password. This gives you as many different passwords as you need and remembers them for you. You'll never forget a password again.

7. Email marketing. If you get unwanted emails from companies and organizations, don't just delete them — unsubscribe. It should only take a few seconds. Just click on the 'unsubscribe' link at the bottom of the email.

8. Old devices. If you've been using technology for any length of time, you probably have a collection of things that you no longer use — memory sticks, USB cables, chargers, old phones, and tablets. If you can't give them to somebody who would use them, recycle old devices properly.

1. d) Search the text. Find six words with the prefix un- to complete the extracts. Tip 1: Why should you have hundreds of un or un emails? Tip 2: Un software or apps that you don't use. Tip 4: You can 'un ' friends without them knowing… Tip 7: If you get un emails from companies and organizations, don't just delete them — un .

2. e) Complete the sentences with un- and the words from the list: clear, comfortable, do, follow, helpful, known, lock, read.

a) Why do you have over 100 emails? b) If you want to what you've done, press Ctrl+Z. c) I had to her as she was posting some really annoying things. d) I can't my phone — I've forgotten the password. e) The IT Support person was very . I still can't print anything. f) I didn't answer the phone, because it said 'caller '. g) I can't set up the new router — the instructions are really .

h) I hate earbuds — I find them really .

3. f) Which of the tips in the article would be most useful for you? Choose your top three. Then discuss your choices in small groups and say why.

Answers (c): tip 1 answer; tip 2 free up; tip 3 find; tip 4 keep; tip 5 Update; tip 6 forget; tip 7 click; tip 8 recycle. Each verb is used exactly once; the first gap of tip 1 is filled by the fixed phrase too many (quantifier practice, Rule 13). Answers (d): unopened, unanswered (Tip 1); Uninstall (Tip 2); unfollow (Tip 4); unwanted emails — unsubscribe (Tip 7). Answers (e): (1) unread (or unopened) emails; (2) undo (Ctrl+Z

undoes the last action); (3) unfollow her; (4) unlock my phone; (5) unhelpful; (6) ‘caller unknown’; (7) unclear; (8) uncomfortable. All eight words from the list are used exactly once, each with the negative prefix un-.

4.5 Numbers practice, Section B: activities 1–4 with solutions

Source: Week_3_Lecture.pdf, Part 4, Section B (the catalogue of number vocabulary is Rule 16, §4.1).

4.5.1 Activity 1: answer the questions

1. What is five squared?
2. What is the next prime number after 19?
3. How is this sequence of numbers created? 3, 9, 27, 81
4. What is the aggregate of this set of test marks? 6, 8, 9, 5, 6, 7
5. If you round up 6.66, what number do you have? 6.3/4 and 4 — which is a whole number and which is a fraction? 7. In your country is tax automatically deducted from employees’ earnings?
8. Is an accountant pleased or displeased if figures that he/she is checking tally?

Answers: (1) Five squared $= 5 \times 5 = 25$. (2) 23 (21 and 22 are divisible; primes after 19 are $23, 29, 31 \ldots$). (3) Each number is multiplied by $3 (3 \times 3 = 9; 9 \times 3 = 27; 27 \times 3 = 81)$ — a geometric sequence. (4) The aggregate is the total: $6 + 8 + 9 + 5 + 6 + 7 = 41$(if the question asks for the average mark, divide by the number of entries: $41 \div 6 \approx 6.8$). (5) Rounded up, $6.66 \to 7$ (rounding = making a fraction/decimal into the nearest whole number, Rule 16). (6)3/4 is a fraction; 4 is a whole number. (7) Open personal answer; model: Yes, in Uzbekistan income tax is deducted automatically by the employer before salaries are paid. (8) Pleased — if the figures tally they match, agree, so there is no error to investigate.

4.5.2 Activity 2: complete the conversation with the correct words

Dr Syal is advising one of his dissertation students who is interested in pollution in road tunnels. Complete the conversation with the correct words.

1: Dr Syal: You could c the total number of private cars that use the tunnel each week, based on the day-to-day figures, and get an a figure for how much carbon they’re all emitting.

2: Melissa: How p would that figure have to be?

3: Dr Syal: Oh, it doesn’t have to be exact, you just need to e more or less what the total pollution will be. Then you can check to see if those figures t with the figures that have already been published for similar tunnels. And the figure won’t be c , of course; it’ll go up and down depending on lots of factors such as weather conditions, average speed, etc.

4: Melissa: But can we say if the figures will be true for the future too?

5: Dr Syal: Well, we do know that traffic has been growing over the past ten years; it hasn’t ever gone down, so I think you can make some useful predictions.

6: Melissa: Should I present each daily total as a d item or can I just put them all together into one figure for each week?

7: Dr Syal: A weekly total is fine, and you can 8 it up or 9 to the nearest 100.

8: Melissa: Right, OK. Thanks so much for your help.

Answers: calculate (work out, Rule 16); approximate (a roughly correct figure); precise (exact); estimate (make a rough guess); tally (match, agree); constant (it will not stay the same — it goes up and down); discrete (a separate item that cannot be divided, Rule 16); (8) round it up; (9) down to the nearest 100 (the fixed pair round up / round down).

4.5.3 Activity 3: rewrite the sentences using the correct form of the word in brackets

1. There were fewer accidents last year. (INCIDENCE) — The incidence of accidents declined last year. (given)

2. We made a rough guess at what the final figure might be. (ESTIMATE)

3. The graph shows the results from the lowest to the highest. (MAGNITUDE)

4. A computer program helped us work out the significance of the different variables. (CAL- CULATE)

5. Taking x away from y will help you arrive at the correct answer. (SUBTRACT)

6. The results from the first experiment were not the same as those we got from the repeat experiment. (TALLY)

Answers: (2) We made a rough estimate of what the final figure might be. (verb

estimate → noun estimate + preposition of); (3) The graph shows the results in order of magnitude, from the lowest to the highest. (fixed phrase in order of magnitude); (4) A

computer program helped us calculate the significance of the different variables. (verb work out → calculate); (5) Subtracting x from y will help you arrive at the correct

answer. (gerund subject; subtract x from y); (6) The results from the first experiment

did not tally with those we got from the repeat experiment. (tally with = match).

4.5.4 Activity 4: complete the email from a maths tutor

Complete the email from a maths tutor using words from the box. There is one word you don’t need. There is also one deliberate mistake in the email. Can you find it and correct it? Box: calculations, variables, figures, reached, area, workings, values, arrived.

Hi everyone...

Just a quick note before you take the exam. Things to remember: The exam lasts one and a half hours, so plan your time carefully. Don’t forget to show your 1 . It is a good idea to show how you 2 your 3 — you’d be amazed at how many people submit answers that are hardly even in the right 4 . And please write legibly — we must be able to distinguish all your 5 . When doing graphs, plot the 6 carefully and if asked to describe an experiment don’t forget to take all 7 into account. Good luck! Helen Ward

Answers: (1) workings (all the calculations leading up to an answer); (2) arrived at (arrive at your answer — the box form arrived is the past participle used after how you arrived); (3) figures; (4) area (the fixed phrase in the right area = approximately

correct); (5) calculations; (6) values (plot the individual data values); (7) variables (take all variables into account). The word you don't need is reached (reach a figure is possible English, but the email's collocation is arrive at). The deliberate mistake is in the first sentence of the second line: "The exam lasts one and a half hours" should be "The exam lasts one and a half hours" — hours is correct, but a half hours breaks agreement: the natural correction is one and a half hours → an hour and a half (or keep one and a half hours and correct the verb phrase). Accept any well-argued correction of the time expression — the point of the task is to notice that one and a half + plural noun is the awkward spot in the email.

4.6 Numbers practice, Section C: talking about numbers — exercises 1–6 with solutions

Source: Week_3_Lecture.pdf, Part 4, Section C (catalogue: Rules 17–18).

4.6.1 Exercises 1–2: proportions

1. Match the phrases from the academic texts, A and C, to phrases with the same meaning from the student citations, B and D. (A) The study found that the majority (56%) of those questioned were non-smokers. This statistics show that the number of smokers varies significantly by city. The highest percentage of smokers was found in Naples (49.5%). (B) According to one study of Italian smoking habits, Naples has the highest proportion of smokers (Ficarra et al. 2011). (C) Today only two per cent of the US population works on farms, while another three per cent works in the food processing and food service industries. This small fraction of the population (five per cent) is able to grow, process and serve enough food to meet the needs of the whole country. (D) Perhaps surprisingly, only a small minority of US workers (around 5%) are employed in food production, yet they produce enough food for the whole population (Bowles et al. 2005).

1. the highest percentage of smokers

2. this small fraction of the population

Answers: $(1) \rightarrow B$(the highest proportion of smokers); $(2) \rightarrow D$ (only a small minority of US workers). 2. Do the underlined phrases refer to a large quantity (L) or a small quantity (S)?

1. This type of treatment is appropriate in only a minority of cases.

2. Fuel costs make up a tiny fraction of the firm's total operating costs.

3. The majority of students at the college speak English as a second language.

4. A high proportion of their income is spent on food and accommodation.

5. This disease affects a relatively small percentage of the population.

Answers: (1) S; (2) S; (3) L; (4) L; (5) S. Minority, tiny/small fraction, small percentage = small; majority, high proportion = large. 3. Complete the sentences using the word in CAPITALS. Add any other words needed. Example: A high percentage of employees (74%) work more than 45 hours. (PERCENTAGE)

1. These examples represent only the total number of cases (less than 4%). FRAC- TION

2. The survey found that customers (82%) are satisfied with the service. MAJOR- ITY

3. patients (approximately 10%) suffer more severe symptoms. PROPORTION

4. In 1900, only 20 American women worked outside the home. PER CENT

5. In people (less than 3%), the problem may continue into adulthood. MINORITY

Answers: (1) a small fraction of; (2) the majority of; (3) A small proportion of; (4) per

cent of (per cent after a number, Rule 17); (5) a small minority of.

4.6.2 Exercises 4–5: averages

4. Read text E (Rule 18) and complete the statements using words from the box: average, calculate, divide, formula, mean, total, value.

1. You can use an to represent a typical for a set of data.

2. The most common way of measuring an average is called the .

3. You can the mean using the shown in the text.

4. You work out the of all the values, then you that by the number of values in the set.

Answers: (1) average / value; (2) mean; (3) calculate / formula; (4) total / divide.

5. Label the pictures using words from the box: divide by, formula, majority, minority, percentage, total. Picture 1 shows the bracketed expression $(_2$

)

; picture 2 labels the fraction line; picture 3 shows $6+9+3+9+7 \neq 34$ circled; pictures 4–6 show a pie chart with 15 % and 85 %.

Answers: (1) formula; (2) divide by; (3) total; (4) percentage; (5) majority (the 85 %

sector); (6) minority (the 15 % sector).

4.6.3 Exercise 6: complete the text describing the table

If we look at the table showing the weather conditions for the island of Madeira, we can see that October to March are the wettest months.1

1Figure 1: Weather conditions in Madeira. Rain (mm): Jan 64, Feb 74, Mar 79, Apr 33, May 18, Jun 5, July

---

0, Aug 0, Sept 25, Oct 76, Nov 89, Dec 84. Wet days: 6, 6, 7, 4, 2, 0, 0, 0, 3, 7, 6, 7. Max temp (°C): 19, 18, 19,

19, 21, 22, 24, 24, 24, 23, 22, 19. Min temp (°C): 13, 13, 13, 14, 16, 17, 19, 19, 19, 18, 16, 14.

The text to complete

To 1 the 2 rainfall for this whole period, we first work out the 3 of the rainfall 4 for these six months: $76 + 89 + 84 + 64 + 74 + 79 = 466$. Then we 5 this by the number of months: $466 \div 6 = 77.66$. So 77.66 mm is the 6 amount of rain during the winter months. Looking at these 7 , we can also say that throughout the year, the 8 of wet days each month is relatively low. The table also shows that for the 9 of the year, the maximum temperature is above 19 °C and for a large 10 of the year, the temperature does not drop below 15 °C.

Answers: (1) calculate; (2) average; (3) total; (4) values; (5) divide; (6) average; (7) fig-

ures; (8) number; (9) majority; (10) proportion. The exercise applies the mean formula of Rule 18 to real data: total first, then divide by the count.

4.7 Week 3 Grammar Worksheet — Quantifiers: exercises 1–7 with solutions

Source: Week_3_Grammar_Worksheet_-_Quantifiers.pdf (rules page reproduced as Rules 1– 11, §4.1; factual answers are checked against page 208 of the source book).

4.7.1 Exercise 1: complete the question with how many or how much

1. active volcanoes are there throughout the world?
2. oxygen is in the air?
3. fish are there in the sea?
4. water is there on Earth?
5. kinds of clouds are there?
6. teeth does an adult human have?
7. does the Earth weigh?
8. oil is used in the world every day?

Answers: (a) How many (countable); (b) How much; (c) How many; (d) How much; (e) How many (kinds); (f) How many; (g) How much (weight = mass); (h) How much. Factual check (worksheet page 208): roughly 1,500 active volcanoes; about 21 % oxygen; $\approx 32{,}000$ fish species; ≈ 10 kinds of clouds; 32 teeth of an adult human; the Earth $\approx 5.97 \times 10^{24}$ kg; $\approx 95 - 100$ million barrels of oil per day.

4.7.2 Exercise 2: complete with aren’t many or isn’t much

1. There rain in the Sahara Desert.
2. There giant pandas left in the world.
3. There snow in countries near the Equator.
4. There unexplored places left on Earth.
5. There people living in the Antarctic.
6. There light in the ocean below 200 metres.
7. There iron in the human body.
8. There mountains on Earth higher than 7,000 metres.

Answers: (a) isn’t much (rain, uncountable); (b) aren’t many; (c) isn’t much (snow); (d) aren’t many; (e) aren’t many; (f) isn’t much (light); (g) isn’t much (iron); (h) aren’t **many.**

4.7.3 Exercise 3: complete each sentence so that it contains the word in capitals

1. Not many people have travelled deeper than 10,000 metres under the sea. (A FEW) → Only a few people have travelled deeper than 10,000 metres under the sea. (given)
2. In fact there are only one or two ways of doing this. (FEW)

3. Divers could not survive at such depths. (NO)

4. Some people have descended this far in underwater vessels called bathyscaphes. (A FEW)

5. They cannot remain under water for many hours. (A FEW)

6. There are many problems involved with descending into deep water. (LOT)

7. There is some light up to 200 metres, but at 10,000 it is completely dark. (NONE)

8. There are not many creatures that live at such a depth. (FEW)

Answers: (b) In fact there are few ways of doing this. (few without a = 'almost none', which matches 'only one or two'); (c) No divers could survive at such depths. (no +

affirmative verb); (d) A few people have descended this far in underwater vessels called bathyscaphes.; (e) They can remain under water for only a few hours.; (f) There are a lot of problems involved with descending into deep water. (a lot of ≈ many in a neutral statement); (g) There is some light up to 200 metres, but at 10,000 there is none.; (h) Few creatures live at such a depth.

4.7.4 Exercise 4: complete the sentence with few or little

1. people think that there are other planets in our solar system with human life just like our own.

2. In fact, there is reason to believe that life of any kind exists on other planets.

3. There are a indications that microbes may exist, or may have existed, on Mars.

4. However, there is real proof of this.

5. There are a traces of methane in the Martian atmosphere, and some scientists believe that this could have a biological origin.

6. Unfortunately, there is agreement among scientists about this.

7. Analysis of the Martian soil suggests that water exists on Mars, and there are a areas where scientists believe ice forms and melts.

8. Other scientists argue that there is chance of finding any life at all on Mars.

Answers: (a) Few; (b) little (reason, uncountable); (c) few (indications, countable); (d) little (proof); (e) few (traces); (f) little (agreement); (g) few (areas); (h) little (chance). The pattern: few + plural countable, little + uncountable (Rule 7, Table 9).

4.7.5 Exercise 5: complete the text with many, much, few, lots, none and little

Science: diet

aMany people nowadays try to follow a healthy diet, although not b experts agree about this. In fact c of people assume that 'diet' is something connected with losing weight. Diet simply refers to the kind of food and how d of it we eat. There are very e foods that we can describe as completely 'unhealthy', and not f foods have zero nutritional value. However, if you eat g of chocolate and fried food and take h exercise, then your diet would probably be described as 'unhealthy'. i experts recommend that we all eat j of fruit and vegetables, and eat very k fatty food. People are often surprised when they discover how l fat there is in popular fast foods such as burgers and pizzas, or how m calories there are in soft drinks. Unfortunately n of

us can resist this kind of food, and there are not o people who are prepared to give up chocolate or chips. There are p easy answers to the question ‘what is a healthy diet?’ However, if we eat q of different kinds of food, drink r of water, and make sure we take s of exercise, then we will be going in the right direction. After all, t of us are perfect!

Answers: (a) Many (given); (b) few; (c) lots; (d) much; (e) few; (f) many; (g) lots; (h) little; (i) Few; (j) lots; (k) little; (l) much; (m) many; (n) none (none of us — zero quantity with of); (o) many; (p) few; (q) lots; (r) lots; (s) lots; (t) none. The pairs to notice: how much fat / how many calories (uncountable vs countable) and not many people (countable plural after not).

4.7.6 Exercise 6: complete the sentence with one word so that it means the same as the first sentence

1. What is the total amount of salt contained in the world’s oceans and seas? → How salt is there in the world’s oceans and seas?

2. We don’t know very much about the deep oceans. → We know very about the deep oceans.

3. Water covers a large part of the Earth’s surface. → of the Earth’s surface is covered by water.

4. There seems to be more than enough food for everyone in the world in the oceans. → There seems to be of food for everyone in the world in the oceans.

5. In fact, large amounts of the food we eat come from the oceans. → In fact, a of the food we eat comes from the oceans.

6. It’s impossible to swim in the Dead Sea because of the large amount of salt in it. → You can’t swim in the Dead Sea because it contains too salt.

7. There is a shortage of fish in some parts of the world. → There aren’t fish in some parts of the world.

8. The Sargasso Sea contains large amounts of seaweed. → There is of seaweed in the Sargasso Sea.

9. There are areas near the Equator where the wind does not blow very much. → There are areas near the Equator where there is not wind.

10. Pollution affects nearly every one of the world’s ocean areas. → There are areas of the world’s oceans not affected by pollution.

Answers: (a) much; (b) little; (c) Most; (d) plenty; (e) a lot; (f) much (too much salt); (g) many; (h) plenty; (i) much; (j) few (few areas not affected = nearly every area is affected).

4.7.7 Exercise 7: underline the correct option (deserts)

Geography: deserts

In geography, a desert is an area which receives a a few / little rain and which loses b a few / a lot of its moisture through evaporation. c Many / Much polar regions can be called deserts, but most of us think of a desert as being a sandy, rocky area with d not enough / few water. e Lots / Lot of deserts consist of sand dunes or bare rock, and f many / much are near mountain ranges, which take away the moisture from clouds. Others are far away from the sea or in other water, so receive g few / little moisture. Although we might assume that very h few / lots kinds of life live in deserts, in fact

there are i lots / many of plants, animals and insects in these regions. j Lots / Many desert plants store water in their leaves or roots, and some desert plants can live for k lots / many years. Some desert animals live underground. They spend l little / a few time in the sun and only come out at night. There are m enough / lots of insects, scorpions and spiders as well as reptiles, such as snakes, lizards and tortoises, in deserts. They need to spend n much / many hours in the sun to generate body heat, so they have o a few / little difficulty living in high temperatures. However, p few / little of them can bear extreme sunlight, so they tend to move from one area of shade to another.

Answers: (a) little (rain, uncountable); (b) a lot of; (c) Many; (d) not enough (water, uncountable — few water is impossible); (e) Lots (Lots of deserts); (f) many; (g) little; (h) few (very few kinds of life); (i) lots (there are lots of plants…); (j) Many; (k) many; (l) little (time, uncountable); (m) lots of; (n) many (hours, countable); (o) little (difficulty, uncountable); (p) few (few of them).

4.8 Professional English in Use: Numbers and trends — exercises and sug- gested answers

Source: PresInEn_-_Numbers_and_trends.pdf (a Professional English in Use / Business Result worksheet on trend language; page header “Step 3: Use visuals to connect”). This page also feeds the Week 4 theme of describing movement and change.

4.8.1 Exercise A: brainstorm graph words

A. Brainstorm all the words you already know to describe the following graphs: (1) an upward trend; (2) the highest point; (3) a downward trend; (4) the lowest point; (5) stability; (6) fluctuation. Word bank (standard answers): upward trend — rise, increase, grow, go up, climb, rocket, take off, double, jump; highest point — peak, reach a high (point), top out; downward trend — fall, drop, decrease, decline, go down, slump, plummet, halve; lowest point — bottom out, reach a low (point), hit a low; stability — remain steady/constant, level off, stabilize, stay the same, hold steady; fluctuation — fluctuate, vary, go up and down, be volatile.

4.8.2 Exercise C: complete the gaps in these presentation extracts

C. Complete the gaps in these presentation extracts, using vocabulary from B.

1. To our surprise, it was the sales of Product A that (1) t over the Christmas period with sales 51 % above target and Product B that (2) s with sales 34 % below target. As a result, we are redesigning the packaging for Product B and are forecasting that sales will (3) r by Easter. If this does not happen and sales show no (4) i , we will seriously have to consider taking Product B off the market.

2. In this period, Brand A’s market share (1) s from 9 % to 8 % and Brand B’s share (2) p from 6 % to just 1 %. Our Brand Z (3) r from 10 % to 25 %. If we look at the budget for TV advertising during this period, we can see clearly that Brand Z (4) d its budget from €250,000 to €500,000. The print advertising budget (5) r during the same period but was concentrated on the target market.

3. I’d now like to focus on the carbon dioxide content. Have a look at this graph. There have been (1) u in the carbon dioxide content since the first unit was installed three years ago. It has (2) f between 0.33 % and 4 % as we have experienced multiple

failures. The units are now working efficiently and carbon dioxide content is (3) h at 0.33 % and we expect this to (4) s at 0.2 % by the end of the year.

4. Let's move onto the statistics. In 1900, 15 % of the workforce was aged over 55 and by 2000 this had (1) g to 33 %. We expect this to (2) j to roughly 40 % by 2030. Life expectancy was approximately 46 years in 1900 but this has (3) s to round about 80 today. What does this all mean for us when we look at the question of age diversity?

Suggested answers (first letters preserved; some items are inferred — check with the course key): (1) (1) took off; (2) slumped; (3) recover; (4) improvement. (2) (1) slipped

(from 9 % to 8 % — a small fall); (2) plummeted; (3) rocketed; (4) doubled (€250,000 → €500,000); (5) remained steady. (3) (1) unwelcome ups and downs (fluctuations);

(2) fluctuated; (3) holding steady; (4) settle. (4) (1) grown steadily; (2) jump; (3) shot up. Tip (from the worksheet)

If you describe a lot of trends, use a wide variety of vocabulary and be dramatic. Sales rocketed in the third quarter is more dramatic and tells your audience more about the trend than Sales increased in the third quarter, for example.

5 Week 4 — Reading and Writing about Movement; Preposi- tions; Test 1

Week 4 of the syllabus is "Reading and writing about movement": the grammar focus is prepositions, the reading comprehension theme is movement and change, and the week closes with Test 1. The dedicated Week 4 lecture had not yet been uploaded to the course folder, so this part assembles the week from the syllabus plan and from the two repository readings that carry the Week 3–4 vocabulary of numbers, speed of change and cause–effect: The power of numbers (Oxford EAP, Unit 3: "The speed of change; describing cause and effect") and Numbers and trends (§4.8), both transcribed here in full with answers.

5.1 Grammar catalogue for Week 4: prepositions

The syllabus lists "Grammar — Prepositions" as the Week 4 focus. At course level (B1, Oxford EAP Pre-Intermediate and the coursebooks cited in the syllabus) the preposition system is taught in three clusters, summarized below.

5.1.1 Prepositions of movement

Preposition Meaning / use Example

to	movement towards a destination	The milk passes to the bottling plant.
into	movement to the inside of something	Pour 50 cc of water into the test tube.
onto	movement to a surface	Put the bottle onto the shelf.
out of	movement from the inside	Take the probe out of the liquid.
off	leaving a surface	Take the pan off the heat.
through	from one side to the other, inside a space	Light does not need to travel through a medium.
across	from one side to the other, on a surface	Waves move across the stadium.
along	following a line	Walk along the corridor to the lab.
past	passing a point	Go past the library and turn right.
up / down	vertical movement	The price of microchips goes down every year.
away from	movement to a distance	The wave moves away from its starting point.
towards	direction without necessarily arriving	The storm is moving towards the coast.

Table 10: Prepositions of movement (Week 4 focus).

Two distinctions the course tests: to vs towards (arrival vs direction) and through vs across (3-D medium vs 2-D surface). Both appear directly in the Week 3–4 readings: “waves must travel through a substance” (Energy text, Week 2 worksheet) and “a wave moves around the stadium”.

5.1.2 Prepositions of place and time (review cluster)

Place: at a point (at the bus stop), in an enclosed space or area (in Tashkent, in the bowl), on a surface (on the side of the bottle). Time: at clock times (at 5.30), on days and dates (on Tuesday, on Fridays), in months, years, seasons and long periods (in 1960s, in winter, in the next decades). Zero article after at/to/from + home, work, school, church (Rule 6 of the Week 2 catalogue) and before next/last + day or week.

5.1.3 Dependent prepositions (verb/noun + preposition)

Collected from the course readings: depend on; arrive at (a figure); tally with; divide by; take x away from y; result in (stereotyping can result in prejudice); based on (generalizations are based on facts); lead to (more research leads to new discoveries); cope with (hard to cope with); be used for + -ing (a thermometer is used for measuring temperature); in charge of ; apart from themselves and 1 (prime numbers).

5.2 Reading: “The power of numbers” — full text, questions and answers

Source: Article_The_power_of_numbers.pdf (Oxford EAP B1, Vocabulary Unit 3: “The speed of change; describing cause and effect”, page 33). Gloss from the page: genome = the complete set of genes in a cell or living thing.

1. 1. Work in pairs and discuss these questions. (1) In what ways has computer technology changed our lives? Make a list. (2) Do you think the world is becoming more competitive? Why / Why not?

2. 2. Read the text and answer the questions below.

The power of numbers

There is an Indian legend that goes like this: once upon a time, a king challenged a pilgrim to a game of chess. The pilgrim agreed, but on one condition: if the king lost, he would put a single grain of rice on the first chess square and then double the amount on every square after that. The king lost and then discovered the price he had to pay: 1 grain on the first square, 2 on the second, 4 on the third, 8 on the fourth, and so on. By the 64th square, the amount came to more than 18,000,000,000,000,000,000 grains of rice! A modern example of this type of growth is Moore's Law. This law says that the power of computer microchips doubles every 18 months. We can see the effects of this if we compare the space shuttle with a smartphone. The computer on the first space shuttle could process 400,000 instructions per second and had a memory of 424 kilobytes. A modern smartphone is over 35,000 times quicker and has over 33,000,000 times more memory! These increases in computing power have caused scientific discovery to speed up. It took the Human Genome Project 13 years, from 1990 to 2003, to analyse the entire human genome. Due to faster computers, scientists can now do this in a week. In the next decades, computers will equal the power of the human brain. This may result in the development of computers that are more intelligent than humans. The possible consequences of this are profound. The increasing speed of scientific discovery is also partly the result of larger social trends. In the 1960s in the UK, about 5 % of young people went to university. Nowadays, 40 % of people in the UK do a degree, whilst in Finland the number has reached 80 %. Between 2000 and 2010, the number of students studying in universities abroad rose by 75 %. Because of the increase in university students, more people now do research at a postgraduate level. This has created greater competition between research departments for funding. As a result, there is more pressure on scientists to publish their findings quickly. This new research then leads to other new discoveries and, as a consequence, new technologies are developed more rapidly. The speed of change is hard to cope with because it means we need to keep learning and adapting. But we'd better get used to it: it's not going to slow down!

1. Why did the king have to give the pilgrim so much rice?
2. What is Moore's Law?
3. Which has more memory: the computer on the first space shuttle or a smartphone?
4. Why is it now quicker to analyse human genes?
5. How many people now go to university in the UK and in Finland?
6. Why is research now published more quickly?

Answers: (1) Because of the doubling agreement: 1 grain on the first square, then the amount doubled on every square, so by the 64th square the total came to more than 18×10^{18} grains — exponential growth far more than the king expected. (2) Moore's Law says that the power of computer microchips doubles every 18 months. (3) A smartphone: the shuttle computer had 424 kilobytes of memory, while a smartphone has over 33,000,000 times more (and is over 35,000 times quicker). (4) Because of faster computers — the Human Genome Project needed 13 years (1990–2003), but scientists can now analyse the entire human genome in a week. (5) About 40 % of people in the UK do a degree, whilst in Finland the number has reached 80 % (compared with about 5 % in the UK in the 1960s). (6) Because more postgraduate

students have created greater competition between research departments for funding;

as a result, there is more pressure on scientists to publish their findings quickly —

and new research then leads to further discoveries.

Model for discussion question 1: Computer technology has changed our lives in many ways: we communicate instantly by video call, we work in the cloud, we navigate by GPS, we shop and bank online, and AI tools help us write and translate. Some changes are positive — information is cheaper and faster — but others are worrying, e.g. battery anxiety and information overload. (For question 2, give your opinion + two reasons, as trained in the Week 2 speaking tasks.)

5.3 Language catalogue: speed of change and cause–effect

The Unit 3 vocabulary focus around the reading is exactly the syllabus Week 4 theme of “movement and change”. The following language is collected from the reading and the trends worksheet.

1. Verbs of change and growth: double (doubles every 18 months), speed up (discovery speeds up), slow down (it’s not going to slow down), rise by (rose by 75 %), reach (has reached 80 %), grow (traffic has been growing), develop (new technologies are developed more rapidly).

2. Cause and effect chains: Because of the increase in university students, more people now do research…This has created greater competition…As a result, there is more pressure…This new research then leads to other new discoveries and, as a consequence, new technologies are developed more rapidly. The four connectors to memorize: because of + noun, as a result, lead to, and as a consequence. The verb result in joins a cause to an effect (This may result in the development of computers that are more intelligent than humans.).

3. Trend vocabulary (from “Numbers and trends”, §4.8): upward movement (take off,

rocket, double, jump, grow steadily), downward movement (slump, plummet, slip), stability (hold steady, remain steady, settle), fluctuation (fluctuate between X and Y). The worksheet Tip: be dramatic — Sales rocketed in the third quarter tells your audience more than Sales increased.

4. Quantifying change: percentages (51 % above target), multiples (over 35,000 times quicker), by + amount (rose by 75 %), from…to (from 9 % to 8 %), between…and (between 0.33 % and 4 %).

5.4 Test 1: format, coverage and preparation

Source: Syllabus Sections 6 and 9.

1. Format. Test 1 is a paper-based writing task, 1 hour, worth 10 % of the course grade, assessing ILOs 1–3 (understand register, voice, numbers and process language; analyze definitions, comparisons and trends; select the correct grammatical form and justify it). It follows the Week 1–3 material.

2. Coverage to revise. From Week 1: present simple (all forms, Table 5), spelling of -s (Rule 3), adverb and expression position (Rules 5–6). From Week 2: present simple vs present continuous in the five semantic pairs (§3.1); stative verbs (Rule 4); the article system a/an, the, zero (Rules 5–6 of §3.1). From Week 3: quantifiers (Table 9), too/enough word order, none/all/each/every, both/either/neither (Rules 1–11, §4.1); number vocabulary (Rules 16– 18).

3. Typical writing-task checklist. (1) Write complete sentences, not notes — the answer key convention in this companion (a full sentence with the justified form) is ex-

actly what the test rewards. (2) When choosing a tense, first ask: routine/permanent → present simple; now/temporary → present continuous; stative meaning → present simple. (3) When choosing an article, ask: first mention or general → *a*/an; already known, unique or superlative → the; general plural/uncountable → zero. (4) When choosing a quantifier, first decide countable or uncountable. (5) Leave 5 minutes to check verbs and articles — most marks are lost there, not in ideas.

6 Appendix — Irregular Verbs and Reference Material

6.1 Irregular verbs (complete course table)

Source: Irregular_verbs.pdf (Appendix 2 of the coursebook, pages 188–189). The table is the reference list for the past simple and present perfect work of the semester; verbs from these tables are also irregular when they have a prefix, e.g. mistake — mistook — mistaken, withstand — withstood — withstood.

Verb Past tense Past participle Verb Past tense Past participle

arise	arose	arisen	fall	fell	fallen
be	was, were	been	feed	fed	fed
beat	beat	beaten	feel	felt	felt
become	became	become	fight	fought	fought
begin	began	begun	find	found	found
bend	bent	bent	fly	flew	flown
bet	bet	bet	forbid	forbade	forbidden
bind	bound	bound	forget	forgot	forgotten

6.3 Workbook extras from the coursebooks

Source: Books.png (coursebook page, exercise 1.2 — a discussion scaffold used with the listening strand). The exercise trains follow-up questions in a conversation about helping others; the full question list is reproduced so the task can be done without the book.

1. Can you tell me some of the practical things that people can do to help their neighbours/neighbors?

2. Why should neighbours/neighbors help each other?

3. Do you think that people in small towns help each other more than people in cities?

4. So why don't they do the same in cities?

5. Let's go on and think about attitudes towards helping other people. Some people don't want to help other people — why do you think that is?

6. Do you think that the governments have a responsibility to help people?

7. But doesn't that sometimes mean that people think it's only the government's responsibility?

8. So, Emanuele, do you think that some people deserve more help than others?

How the scaffold works. The letters A–H are not random questions but a chain: A–D move from what (practical examples) to why (reasons) to a comparison (towns vs cities); E–H then push the discussion towards attitudes and responsibility, ending with a personal challenge to the speaker. Model answer to D: In cities people often don't know who lives next door, and they expect services to be paid for, so informal help is rarer than in small towns, where communities are closer. Model answer to G: Yes, sometimes. If people believe the state will solve everything, they stop helping voluntarily — so a balance between government support and personal responsibility is healthiest.
