

MATH I – Fall 2026

GUIDANCE for TEST 1 Preparation

The best strategy for preparing for the Test comprises the following steps:

1. Study the required readings (questions may be selected from theory/concepts, e.g., a question may ask what the condition is for having a two-sided limit). Let the Lecture presentations to guide you for the important concepts/methods. Also, see “Most Important Chapters/Sections/Notes” below.
2. Study very well the examples and exercises presented in the Lecture presentations.
3. Study very well the exercises covered in the Practical Sessions.
4. Study very well the Independent Study Assignments (ISA).

Most Important Chapters/Sections/Notes (regarding Test 1)

We expect you to study all the material covered in the first 3 weeks. However, we would like you to place particular emphasis on the following:

From Week 1: Instructor Notes on numeral systems (Week 1 Notes Part 2), Instructor Notes on number systems (Week 1 Notes – Part 3). Emphasis on scientific/engineering notation, complex numbers.

From Week 2: Sections 1.2 (Basic classes of functions) and 1.5 (Exponential and Logarithmic functions – *exclude* the Hyperbolic functions)

From Week 3: Section 2.2 from OpenStax Calculus 1.

In Lectures we cover the most important concepts and methods. Each Lecture presentation can guide you to the most important topics.

Important:

- 1) **Be on time!** The Test will begin at exactly the start of the class.
- 2) **Follow the instructions** written on the problems' page.
- 3) Duration of exam: the full first part of the Lecture (80 minutes), if you finish earlier, you can leave the room.
- 4) **No use of calculators (or any other digital device).** The problems are meant to test your knowledge of concepts and methods. Showing the mathematical procedure, giving clear explanations, and the reasoning behind your solution are the important aspects that we would like to see in your work. No heavy algebra is required for solving the problems. If you get stuck with algebra, just explain clearly what you want to do.
