MATH I – Fall 2026

GUIDANCE for MIDTERM EXAM Preparation

Important points:

1. The Midterm Exam will take place on MONDAY, November 2, during the regular Lecture hours.
2. Total duration: 2 hours.
3. It is a pen-paper Exam. No digital/electronic devices are allowed. No books, no notes. Mobile phones and all digital/electronic devices and paper notes/books will be secured in your bags.
4. No restroom (toilet) breaks will be allowed during the Midterm Exam duration.
5. The Midterm Exam will focus primarily on textbook Chapters 2 (sections 2.1-2.4) and Chapter 3 (sections 3.1-3.5, and 3.9 [except for subsection 3.9.3] **and** the Instructor's NOTES. We assume that you know well the material covered before, in weeks 1-3, which was tested in Test 1.
6. The Midterm Exam will start sharply at the start time of the Lecture class and will end after exactly 2 hours.
7. You must return all the handouts given to you for the Exam (problem sheets, solutions sheets, crap paper).
8. If you finish earlier, you may leave the classroom, but you must have already returned all the handouts (see previous point).
9. *What to expect from you, regarding your answers to the Exam problems:* The problems are meant to test your knowledge of concepts and methods. Showing the mathematical procedure, giving clear explanations and the reasoning behind your solution are the important aspects that we would like to see in your work. No heavy algebra is required for solving the problems. If you get stuck with algebra, just explain clearly what you want to do.

The best strategy for preparing for the MIDTERM Exam comprises the following steps:

- Study the required readings (chapters/sections from textbook) and instructor Notes.
- Study very well the Lecture presentations and the examples and exercises presented in them, because they cover the most important concepts and methods.
- Study very well the exercises covered in the Practical Sessions. Study very well the Independent Study Assignments (ISA).
